### EXAMINER'S AMENDMENT

An Examiner's Amendment to the record appears below. Should the changes and/or additions be unacceptable to applicants, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it must be submitted no later than the payment of the issue fee.

Authorization for this Examiner's Amendment was given in a telephone interview with Charles Carry on 09/24/06

Please amend the independent claims 1 and 6 and cancel claims 5 and 9.

Claim 1 (currently amended): A networked optical storage server configured to couple to a plurality of users across a network; and the networked optical storage server comprising:

- at least one optical storage media;
- a network module configured to couple to the network for packet based communications with the plurality of users across the network;
- at least one non-optical memory coupled between the network module and the at least one ~~non-optical storage media~~ memory for temporary storage of data packets received from corresponding ones of the plurality of users; and

Art Unit: 2145

- a processor coupled to the at least one non-optical memory and configured to coalesce in the non-optical memory related data packets from a corresponding file or datastream into a corresponding aggregate data packet and to write each corresponding aggregate data packet to the at least one optical storage media, thereby reducing a number of write operations required to write data to the at least one optical storage media.

Claim 6 (currently amended): A method executed on ~~an~~ a networked optical storage server configured to couple to a plurality of users across a network, comprising the acts of:

- providing at least one optical storage media and at least one non-optical memory coupled thereto for temporary storage of data packets received from corresponding ones of the plurality of users;
- coupling the at least one non-optical memory to the network for packet based communications with the plurality of users across the network;
- coalescing in the non-optical memory ~~multiple~~ related data packets each associated with a corresponding file or datastream received from the plurality of users into a single corresponding aggregate data packets; and
- writing each corresponding aggregate data packet coalesced in the coalescing act to the at least one optical storage media, thereby reducing a number of write operations required to write data to the at least one optical storage media.

Claim 5 (Cancelled)

Claim 9 (Cancelled)

### Reasons for Allowance

1. Claims 1-4,6-8 will be allowed.
2. The following is an examiner's statement of reasons for allowance.

The prior art references most closely resembling the applications claimed invention are Oliver et al (U.S. 5,745,458) and Broderon et al (U.S. 2002/0112226).

First Oliver discloses an overlapped spin up process for an optical disk which may be part of a single drive or juke box. However Oliver did not disclose, "at least one non-optical memory coupled between the network module and the at least one non-optical memory for temporary storage of data packets received from corresponding ones of the plurality of users" as part of all independent (claims 1, 6).

Second Broderon discloses a multimedia authoring software application capable of burning authored movies directly onto a DVD. However Broderon did not disclose, "at least one non-optical memory coupled between the network module and the at least one non-optical memory for temporary storage of data packets received from corresponding ones of the plurality of users" as part of all independent (claims 1,6).

In summary, the Examiner submits that there is no motivation to combine the aforementioned references; therefore, claims 1-4,6-8 have been deemed allowable over the prior art.
